How to send mail with attachment using php mail function

Html :

```
<form method="post"  action="" enctype="multipart/form-data">
    <table>
      <tr>
        <td>Full Name :</td>
        <td><input type="text" name="fullname" /></td>
      </tr>
      <tr>
        <td>Email :</td>
        <td><input type="text" name="email" required=""/></td>
      </tr>
      <tr>
        <td>Contactno :</td>
        <td><input type="text" name="contactno" maxlength="13" /></td>
      </tr>
      <tr>
        <td>Subject :</td>
        <td><input type="text" name="subject" required="" /></td>
      </tr>
      <tr>
        <td>Message :</td>
        <td><textarea name="message"  required="" style="height: 80px; resize: none; width:
235px;" ></textarea></td>
      </tr>
      <tr>
        <td>Attachment  :</td>
        <td><input type="file" name="upload"  required="" /></td>
      </tr>
      <tr>
        <td colspan="2"><input type="submit" name="send" value="Send" /></td>
      </tr>
    </table>
</form>
```

Php :

```
<?php
  if(isset($_POST['send']))
  {
      $fullname=$_POST['fullname'];
      $email=$_POST['email'];
      $contactno=$_POST['contactno'];
      $subject=$_POST['subject'];
      $message=$_POST['message'];

      /*   Code for upload file    */
      $upload_dir="uploads/attachment/";
      if (!is_dir($upload_dir))
      {
         mkdir($upload_dir, 0777, true);
      }
      $filename=$_FILES["upload"]["name"];
      move_uploaded_file($_FILES["upload"]["tmp_name"], $upload_dir . $filename);

      /*   Code for mail    */

      $from = $email;
      $to='bharat.prajapat@newtechfusion.com';
```

Send Mail From Localhost Using Codeigniter

To Send Mail From Localhost Using Codeigniter follow the steps

First:

Create a file named as "email.php" in "application/config" (to autoload the file)

```php
<?php
    $config['protocol'] = 'smtp';
    $config['smtp_host'] = 'ssl://smtp.gmail.com';
    $config['smtp_port'] = '465';
    $config['smtp_user'] = 'yourmail@gmail.com'; //change this
    $config['smtp_pass'] = 'yourmailpassword'; //change this
```

```
    $config['mailtype'] = 'html';
    $config['charset'] = 'iso-8859-1';
    $config['wordwrap'] = TRUE;
    $config['newline'] = "\r\n"; //use double quotes to comply with RFC 822 standard
?>
```

Second:

Create a controller file named as "Sendmail" in controller folder and paste the following code;

```php
<?php

 class Sendmail extends CI_Controller {

    function index()
    {
     $configs = array(
          'protocol'  =>  'smtp',
          'smtp_host' =>  'ssl://smtp.gmail.com',
          'smtp_user' =>  'yourmail@gmail.com',
          'smtp_pass' =>  'yourmailpassword',
          'smtp_port' =>  '465'
       );
    $this->load->library("email", $configs);
    $this->email->set_newline("\r\n");
    $this->email->from('yourmail@gmail.com', 'Bharat Prajapat');
    $this->email->to('yourmail@gmail.com');
    $this->email->subject("This is Test Subject.");
    $this->email->message("Body of the Message");
    if($this->email->send())
    {
       echo "Done!";
    }
    else
    {
       echo $this->email->print_debugger();
    }
   }
 }
?>
```

It's Done check you mail
